

Why does Coors Boulevard require safety improvements?

Since 2015, at least 18 people have been killed, 17 people have been seriously injured, and 1,209 crashes have been recorded along Coors Boulevard between Blake Road and Gun Club Road.

Safety Concerns Include:

Few Crosswalks

There are few crosswalk intersections, leaving people to unsafely cross streets without a pedestrian signal.

Low Lighting

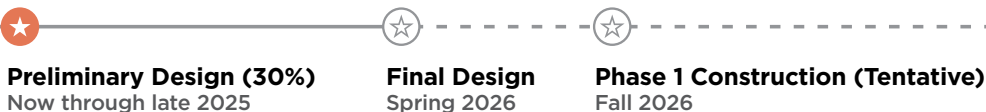

This creates conditions where cars have hit pedestrians at high speeds (particularly during the evening, late night, or early morning hours).

Lacking Sidewalks

Along the roadway itself, there is a lack of sidewalks and other multi-use paths, leaving people to travel along the shoulder—which is dangerous for walking, biking, and using mobility devices.

Project Schedule

Safety Priorities

There are many options to make Coors Boulevard safer for everyone walking, biking, and driving — but we can't do everything all at once. **That's why we want to hear from you!**

ONLINE SURVEY

Which improvements are most important and need to come first?

Take our quick interactive survey (takes less than two minutes!) to share your priorities. Encourage friends, family, and interested community members to do the same. Together, your input will help shape the future of safety along Coors Boulevard.
